

EXPLANATION

Contours of Bouguer anomaly values
drawn by computer from a 2.5 km by
2.5 km gridded representation of
the data.
Contour interval is 5 milligals.
Inches are used to indicate
gravity lows.

Anomalies were calculated relative to the 1967 Geodetic
Reference System formula for theoretical gravity (Internation-
al Association of Geodesy, 1971), and base values were
adjusted to conform to the International Gravity Standardi-
zation Net of 1971 (Morill, 1971). Terrain corrections
have been calculated from 0.895 km to 186.7 km using a
modification of the terrain correction program of Plouff
(1977). No terrain corrections have been applied for the
zones closer than 0.895 km, but in most cases errors
resulting from this omission are substantially less than
1.0 mgal.
